

Phishing Protection Across Your Organization — PhishProof™

Successful phishing campaigns are the number one cause of data breaches. Routinely running phishing simulations on your employees helps prepare them to be your first line of defense and is a key part of any effective security awareness program. Inspired eLearning has developed PhishProof, one of the most sophisticated anti-phishing simulator tools in the market, to prepare your organization for all four phishing attack methods - email, phone, text, and USB baiting.

With PhishProof™, organizations of any size can test, train, measure, and improve their phishing preparedness all under one unified experience, while tracking meaningful ROI.

 Our research reveals organizations that send simulated phishing attempts to their employees once a month show a **27% decrease in clicks**.

PhishProof Product Features

Easy-to-use dashboard with detailed reporting

Campaign scheduling & randomization

PhishHook: suspicious email reporting tool for Outlook

Varying levels of template difficulty

Phishing focused learning paths

Customizable educational landing pages to use when a user clicks on a simulation

Choose from multiple attack templates

Customizable domains

Send phishing simulations by using our premade templates or by customizing your own. Randomize or schedule campaigns to target employees at any time or create USB Baiting campaigns. A click will result in automatic enrollment into reinforcement training.

Every Security First Solution includes PhishProof™ – **Select** starts with 6 campaigns; **Preferred** starts with 12 campaigns; and **Elite** starts with 24 campaigns.

Email Phishing

Test employees' phishing preparedness by sending them phishing email simulations. Security administrators can schedule and randomize these campaigns to increase the authenticity of the phishing attempt. Should an employee fail a phishing campaign, PhishProof™ will automatically deploy reinforcement training.

Vishing

Vishing or voice phishing is the fraudulent practice of extracting sensitive information over the phone. Educate employees on how to thwart these attacks with our new vishing simulator. Choose from more than 19 voice templates and track your susceptible users with our world class analytics.

SMiShing

With PhishProof™ you can send employees SMS text messages to test employees' vulnerability to SMiShing attacks. Cybercriminals use this social engineering method to obtain sensitive and personal information through smartphones. Choose from more than 12 templates and track click rates through your dashboard.

USB Baiting

With the USB Baiting feature, security administrators can test and educate their users on the threats of plugging in unauthorized USB drives. "Lure" educational pages are offered in MS Excel, MS Word, MS PowerPoint, and PDF formats which allow you to create authentic looking artifacts that would pique user's curiosity and persuade a click or open.

About Inspired eLearning

Named an Inc. 5000 company for the 5th year in a row, Inspired eLearning delivers the highest quality educational products to transform corporate culture, nurture and enhance workforce skills, and deliver maximum ROI for the corporate education budget.

Inspired eLearning offers Security Awareness and Compliance solutions that include Security First Solutions, CyQ Cybersecurity Assessment tool, PhishProof™ phishing assessment software, content integration, and a fully hosted web-based eLearning course delivery and tracking system using the iLMS (Inspired eLearning Management System).
